PLEASE READ BEFORE BOOKING

This bouncy castle is 40 foot long by 10 foot wide.

You will need a minimum area of 50ft by 15ft to fit it in safely so that it is not rubbing off anything and so that the kids can enter/exit safely.

It will have to be placed on real grass so that it can be anchored down safely using metal stakes when setting up outside.

If you only have artificial grass or a hard ground area, please contact us via phone call to discuss if an alternative method of anchoring the unit is possible. We charge extra if sandbags and underlay are needed.

We need a minimum side entrance gap of 3.5 foot to transport it from the van to the garden. If you only have access to the garden through the house please contact us via phone call to discuss suitability.
